SCO*office* Server™

E-mail and Collaboration for SCO® UNIX® Servers

SCO GROWS

YOUR BUSINESS

SCOoffice Server combines security and reliability with a friendly, full-featured Internet e-mail and collaboration solution. Designed with comprehensive security and collaboration features, SCOoffice Server prevents e-mail viruses, filters out junk e-mail, schedules group meetings, shares contact lists, and manages group tasks.

NEW FEATURES INCLUDE:

> *Support for OpenServer 6.0 and UnixWare 7.1.4*
> *Wireless Application Protocol email*
> *Jabber instant messaging*
> *Updated Outlook connector*
> *Out of Office message improvements*
> *Configurable log rotation*
> *Active Directory server synchronization*
> *Support for migrating Contact and Calendar entries from MS Exchange*

INTERNET E-MAIL

SCO*office* Server is a reliable, full-featured Internet e-mail solution. SCO*office* Server not only lets you control e-mail, but it also lets you control those who may send and receive Internet e-mail. In addition, your traveling or offsite workforce may send and receive e-mail securely from anywhere in the world. SCO*office* Server is also WAP-enabled.

VIRUSES, SPAM, AND SECURITY

SCO*office* Server stops e-mail viruses, filters out junk e-mail, and secures remote access. Because SCOoffice includes server-side antivirus protection, it stops viruses before they reach desktop systems.

With the skyrocketing cost of receiving, storing, and processing junk e-mail, SPAM blocking is a must. The built-in SCO*office* Server SPAM filters make blocking junk e-mail effortless.

If you have an offsite or a traveling workforce, then secure access is essential. SCO*office* Server lets your offsite workforce securely collaborate and use e-mail from anywhere in the world.

REAL-TIME COLLABORATION

SCO*office* Server delivers real-time collaboration for scheduling group meetings, sharing contact lists, and managing group tasks. Instead of calling people to find available meeting times, simply select those to attend and schedule the meeting immediately.

If your workforce needs to schedule resources and equipment such as conference rooms and projectors, then that's no problem. SCO*office* Server eliminates the need to make a dozen phone calls to schedule a single meeting.

The built-in collaboration software enables shared contact lists, folders, journals, notes, and group task lists. The SCO*office* Server solution helps any office collaborate and work more efficiently.

MICROSOFT OUTLOOK, WEB BROWSERS, AND E-MAIL READERS

SCO*office* Server integrates with Microsoft® Outlook® and industry-standard Web browsers and e-mail readers. With a single click of the mouse, Outlook users are configured to use the advanced SCO*office* Server e-mail and collaboration features.

SCO*office* Server also integrates with industry-standard Web browsers such as Internet Explorer, Netscape®, and Mozilla™. From Web browsers, users access the WebClient for sending and receiving e-mail and for collaborating with Outlook and other WebClient users.

In addition, SCO*office* Server integrates with other industry-standard e-mail readers such as Netscape, Mozilla, Outlook Express, Eudora™, and others.

SCOoffice Server

FRIENDLY INTERFACE

SCOoffice Server works great for businesses with non-technical administrators like business owners and administrative assistants. The simple-to-use interface lets you easily control users, aliases, mailing lists, junk e-mail, passwords, and much more. Simple SCOoffice Server dialogs streamline even complex tasks in a quick and efficient manner.
