As one of the most successful operating systems ever released, SCO OpenServer 5.0.7 has been unmatched with its stability, reliability and scalability. OpenServer has helped businesses around the world run mission critical applications. From Fortune 500 companies to the small business owner, OpenServer has helped grow business. OpenServer 5.0.7V version 1.0.0 for Microsoft Hyper-V is a new release of OpenServer 5.0.7 that has been optimized by SCO engineers for installation and operation in a virtualized environment.

In the economic realities of today’s IT infrastructure, virtualization is providing a way to reduce hardware and infrastructure costs, reduce power consumption, and streamline application deployment and migration. With OpenServer 5.0.7V, the first virtualized SCO UNIX product available, customers can improve their Total Cost of Ownership (TCO) and continue to operate in the familiar environment of SCO UNIX. OpenServer 5.0.7V allows you to operate with fewer resources while meeting the needs of customers today and into the future.

**WHY UPGRADE?**

With over 2 million SCO UNIX servers sold, thousands of SCO UNIX installations can upgrade to a virtualized environment and take advantage of the latest hardware and application environments; including state-of-the-art hardware and computer systems. OpenServer 5.0.7V gives customers a familiar environment while increasing the power and efficiency of a virtualized infrastructure.

Migration and retooling costs associated with it are a daunting and oftentimes an inhibitor to hardware and application upgrades. With a virtualized environment, those inhibitors are eliminated. Plus, with the unmatched stability and reliability of SCO UNIX, your TCO is significantly reduced.

**INVESTMENT PROTECTION**

If you are like many SCO UNIX customers, you have invested significant time and money in developing proprietary OpenServer 5.x applications. With OpenServer 5.0.7V, your investment is protected and is given new life by opening up new and modern hardware solutions. With our virtualized version, the life cycle of your investment is extended without any costs associated with migration or re-writes.

**STOP BUYING SERVERS**

Take advantage of your current server investment by running multiple virtual machines to better utilize any spare memory or idle CPUs. With OpenServer 5.0.7V, a UNIX virtualization strategy enables administrators to reduce the number of servers, hardware devices and data centers which not only downsizes the infrastructure and maintenance costs but also reduces power consumption.

With OpenServer 5.0.7V, IT professionals can reduce the need for additional server purchases and reduce server maintenance costs.

The Most Reliable Operating System Just Became Virtual

**THE POWER OF OPENSERVER MEETS THE POWER OF VIRTUALIZATION**

OpenServer 5.0.7V for Microsoft Hyper-V is released as a Virtual Machine image that can be easily imported onto Microsoft Hyper-V Server 2008 or Microsoft Windows Server 2008. Importation of the Virtual Machine just takes a few minutes to complete and running the first time setup wizard takes only 5 to 10 minutes to complete. Once installed, the system behaves just like a native OpenServer 5.0.7 system with all of the latest maintenance installed.

**A TRUE OPENSERVER 5.0.7 VIRTUAL APPLIANCE**

Using SCO OpenServer 5.0.7 as a base, SCO has built an optimized Virtual Machine for Microsoft Hyper-V. This Virtual Machine uses a subset of existing and updated device drivers that provide optimal performance in a virtual environment. The implementation of OpenServer 5.0.7V as a Virtual Machine means that you can easily have a Virtual Machine imported and configured within minutes.

**AFFORDABLE TOTAL COST OF OWNERSHIP**

SCO OpenServer is a system you’re familiar with. That means no retraining or relearning a foreign system in order to keep up with technology advancements. And SCO OpenServer stays up and running reliably month after month so your maintenance costs can be kept at a minimum. What’s more, SCO OpenServer is easy for you to maintain and support. In short, SCO OpenServer has all the attributes of a rock solid, dependable operating system platform.

**FEATURES**

In addition to the existing features available in OpenServer 5.0.7, OpenServer 5.0.7V for Microsoft Hyper-V comes with the following features:

- A complete, up to date OpenServer 5.0.7 System with the latest maintenance already installed
- Drivers pre-configured for best performance
- Easy to follow configuration screens to set up or reconfigure the system
- Compatible with Microsoft Windows Server 2008 Release 2, Microsoft Hyper-V Server 2008 R2, Microsoft Windows Server 2008 Release 1, and Microsoft Hyper-V Server 2008 R1
- New Subscription based licensing and registration
- Leverages the wide availability of Microsoft Hyper-V Server supported bare-metal systems

**BENEFITS**

Adopting OpenServer 5.0.7V provides the following benefits

- Ability to run OpenServer 5.0.7 applications on Microsoft Hyper-V supported hardware as long as a valid license is on the system.
- Familiar SCO UNIX environment with the power of hardware and application improvements
- Reduced infrastructure costs – maximize current hardware investment
- Greener IT
- Streamlined application deployment and maintenance
- Avoids the high cost of building and migrating to new application implementations.
- Takes advantage of server consolidation
- Simplified IT management
- Reduced IT complexity

The implementation of OpenServer 5.0.7V as a Virtual Machine means that you can easily have a Virtual Machine imported and configured within minutes.
The Most Reliable Operating System Just Became Virtual

**VIRTUALIZATION BASICS**

With OpenServer 5.0.7V customers will be able to capitalize on the benefits of virtualization which is one of the fastest growing and most popular trends in the IT industry today, and is changing the computing landscape. Virtualization allows multiple operating systems to run side-by-side as peers on the same hardware server. This provides a hardware cost savings and efficiency for IT departments. With OpenServer 5.0.7V customers can take advantage of the full range of modern hardware support provided by the Microsoft Hyper-V virtualization layer while continuing to run their current applications.

For customers, virtualization essentially lets one computer do the job of multiple computers by sharing the resources of a single computer across multiple environments. Virtual servers and virtual desktops let customers host multiple operating systems and multiple applications both locally and in remote locations, freeing them from physical and geographical limitations. The result is that in addition to energy savings and lower capital expenditures due to more efficient use of hardware resources, customers obtain high availability of resources, better desktop management, increased security, and improved disaster recovery processes.

**CUSTOM IMAGES ARE ALSO AVAILABLE**

If the off-the-shelf image available from SCO does not quite meet your requirements, SCO Professional Services are available to help you to create a customized image. Options include:

- Reduced set of OpenServer 5.0.7 packages, in order to create an image with a smaller footprint
- Addition of a customer-supplied application or solution
- Changes to the start-up configuration screens for customer requirements or to add configuration of a customer solution
- Special requirements for filesystem arrangements on the virtual hard drive

To discuss these or any other customizing requirements for OpenServer 5.0.7V, contact SCO at consulting@sco.com, or visit http://www.sco.com/consulting

**SYSTEM REQUIREMENTS**

OpenServer 5.0.7V may be installed on a Microsoft Windows Server 2008 Release 2, Microsoft Hyper-V Server 2008 R2, Microsoft Windows Server 2008 Release 1, or Microsoft Hyper-V Server 2008 R1. While the underlying hardware needed to support an installation will vary depending on the applications and installation options chosen, customers should check with Microsoft for the recommended system requirements.

Importing of SCO OpenServer 5.0.7V for Microsoft Hyper-V will create a Virtual Machine with the following specifications:

- CPUs: 1
- Floppy Drives: 1
- CD/DVD Drives: 1
- Memory: 256Mb (this can be increased post-import)
- Network Adapters: 1 Adapter using the d21x Digital Semiconductor NIC emulation
- Disk Controller: 1 Controller using the IDE emulation
- Hard Disks: 1 Virtual Disk of 8 Gbytes (includes 2Gbytes of swap)
- Video: SVGA 1024x768x64k colors – Microsoft Hyper-V VESA – VBE 2.0
The Most Reliable Operating System Just Became Virtual

The Microsoft Hyper-V System you are installing on will need the following in order to run SCO OpenServer 5.0.7V successfully:

- Hard Disk Space with at least 8Gbytes of free disk space to hold the SCO OpenServer 5.0.7V for Microsoft Hyper-V virtual machine. Note that additional disk space can be configured for your virtual machine once the import is complete.
- A Virtual Network that can be used to attach the pre-configured d21x virtual Network Card.
- At least 256Mbytes of free memory. Note that the amount of memory used by your virtual machine can be increased once the import is complete.

Licensing and Registration

OpenServer 5.0.7V is being offered solely in the Enterprise Edition and is being licensed under an annual subscription model. OpenServer 5.0.7V requires the installation of a time-limited subscription license available from SCO resellers. OpenServer 5.0.7V may be licensed in one of three ways:

1. An initial OpenServer 5.0.7V license with duration of one or three years.
2. An OpenServer 5.0.7V cross grade-grade license with duration of one or three years, in combination with a previously purchased OpenServer 5.0.7 Enterprise or Enterprise Trade-In license. Both will need to be entered when installing OpenServer 5.0.7V.
3. An OpenServer 5.0.7V cross grade-grade license with duration of one or three years, in combination with a previously purchased OpenServer 5.0.6 Enterprise License and an upgrade to OpenServer 5.0.7. All three will need to be entered when installing OpenServer 5.0.7V.

SCO Global Services

SCO’s award-winning Global Services offer a complete portfolio of world-wide services on SCO’s full range of software products, allowing customers powerful choices based on business requirements.
